ELECTRIC VEHICLES

Technology Overview

Electric Vehicles (EVs) use electricity to charge a battery, which then discharges its energy to propel the vehicle. Instead of requiring gasoline fill-ups at a gas station, like a gasoline-powered car, electric vehicles are plugged into electric chargers. There are two types of electric vehicles: pure battery-electric vehicles, that run solely on electricity, and plug-in hybrids, which have a back-up gas tank.

ELECTRIC VEHICLES

Benefits of Electric Vehicles

COST

- Cost competitive with gasoline-powered vehicles with today's available incentives
- Fuel costs of electricity are typically lower than fuel costs for gasoline-powered vehicles
- Save money by eliminating oil changes and reducing the number of service visits needed

COMFORT

- Some of the safest cars on the market due to their weight distribution
- Improved air quality due to reducing the amount of particulate matter and harmful chemicals released into the environment

GREENHOUSE GAS EMISSIONS

- Lower greenhouse gas emissions than gasoline-powered vehicles
- Potential to have lowest greenhouse gas impacts when paired with solar PV or 100% renewable electricity

OPERATION

- Eliminate oil changes and reduce maintenance
- Reduce the number of service visits necessary – brake pads on electric vehicles last much longer than their gasoline-powered counterparts
- Reduce the time spent going to the gas station by charging electric vehicles at home, work, or while you are out doing errands
